One of our Surface Cleaners Used With Hot Water for the Best Concrete Cleaning Available Anywhere!

Pricing

We charge by the square foot for surface cleaning concrete. Prices vary depending upon options desired. For example, for areas that have not been washed for a long period of time where grime and gum build up is heavy, a first time clean up with gum removal usually runs higher than normal maintenance washing for the same options. Give us a call for a free estimate! We also measure the area to be washed and provide a diagram of the wash area for your convenience!

For washing of vehicles, trucks, RV's, houses, buildings, etc. we provide free estimates! Call us today! Some pricing can be given over the phone depending upon the wash job.

Pressure Wash Equipment

We use top industry equipment with average 3500 to 4000 psi and hot water washing capability.

Water Recovery Regulations

We also provide water collection and remediation services when necessary due to EPA regulations. There is an additional charge for these services where they are required by law. We perform Hazmat services as well for spill cleanup!

For water collection services required when we wash, we setup recovery tank(s), pumps and water collection equipment.

Depending upon the service needed, we also use Ready Sorb EPA certified absorbent for oil, gas, diesel or other hydrocarbons and also may use Ready Bubble Bugs or Remediator microbes that will eliminate hydrocarbons in the environment.

Service Area / Travel

We provide washing services for the Central Texas and surrounding area. Also, we can travel anywhere washing is required. We contract for fleet washing and washing of service station drives for example even out of the Central Texas area.
